What is MARS Suite?

MARS Suite is a certified cybersecurity situational awareness **Security Information and Event Management** tool that provides continuous enterprise monitoring and presents a common operating picture of cyber risk.

Awareness

Make real time, data informed decisions to reduce vulnerabilities and improve operational efficiency and effectiveness, which ultimately lowers costs.

- Real time awareness
- Visibility into changing risk
- Status of assets
- Enable digital transformation

Knowledge

Unique approach simplifies, prioritizes, and optimizes an organization's cybersecurity posture, enabling digital transformation while enhancing operational effectiveness by prioritizing and fortifying infrastructure protections.

- Comprehensive risk picture
- Autonomous scan management
- Risk vector assessment
- Continuous Monitoring

Respond

A powerful cyber risk management capability increases your ability to see and respond (knowledge) to known and unknown risk across your enterprise.

- Incident awareness
- Response management
- Event mitigation
- Prioritized response

Common Operating Picture

- Aggregate and view data from multiple sources.
- Prioritize information, actions, and responsibilities.
- Configurable for legacy systems and diverse components.
- Confidence in Cyber posture – from decisionmaker through analyst

Our MARS Suite Team is a product of the combined capability of Mission Multiplier and All Points LLC's join venture: Mission Innovate. With our award-winning expertise and highly innovative cyber solutions, we have tailored a quality cyber security product – with the certifications and accreditations to back it up. We are:

- ISO 9001 (AS 9100) certified
- CMMI DEV 3 certified
- Federal Information Processing Standards (FIPS) approved

- DoD JITC Approved Cyber Security Product
- DoD Approved Product List (APL)
- National Information Assurance Partnership (NIAP) tested

Shared Knowledge is Powerful

Increased awareness enables real-time, informed decision-making that reduces overall cyber risk and improves operational efficiency and effectiveness.

Asset Discovery

- Auto-discover and map network assets
- Aggregate systems and pull relevant information
- Assets lists and network maps
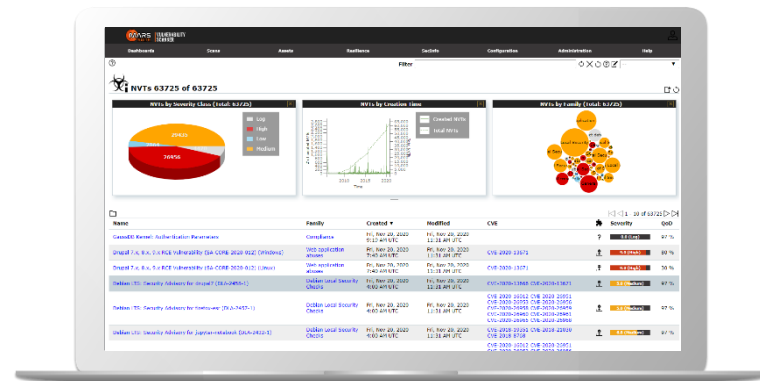

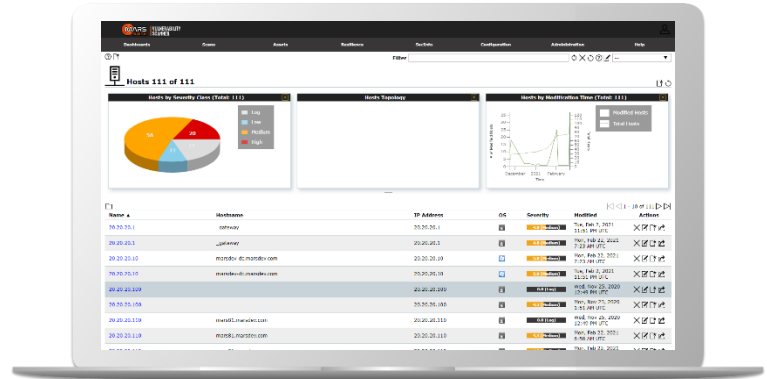

Threat Repositories

- Display threat source, description, severity, and impacted assets
- Threat information pulled directly from National Vulnerability Database (NVD)
- View NVT, CVE, CPE, CERT, and SCAP data

Asset Vulnerability Scanner

- Full-featured network scanner
- Scan for vulnerabilities, anomalies, deficiencies, and configuration flows
- Scheduled and manual scanning
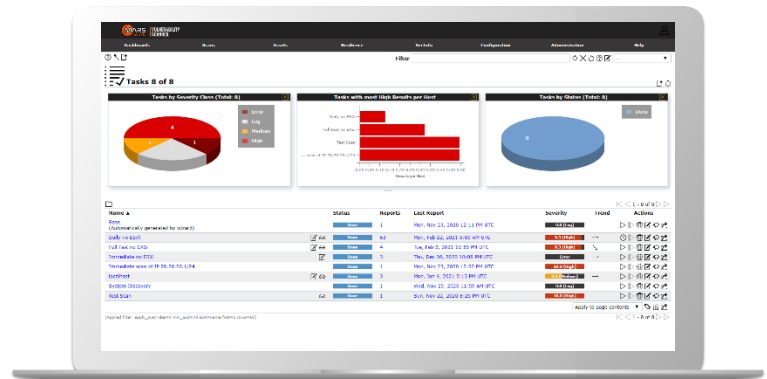

Simplify your cyber risk scoring. Prioritize situational understanding. Optimize your cyber posture and resource allocation. Revolutionize your cyber risk management with MARS Suite.
