

## Overview

With the landscape of increasingly frequent and complex network attacks, financial institutions need next-generation security appliances more than they ever have before. In an industry where time really is money, these appliances have to integrate seamlessly with the network to keep systems secure without slowing down operations.

The Mission Multiplier SATURN-i has you covered with a next-generation firewall, intrusion prevention, bandwidth control, and more, all in an easy-to-install and affordable package. With the SATURN-i on your system, client data is safe, access to business-critical data is immediate, and satisfying compliance standards is simple.

## Solutions Perfect for the Financial Industry

Take a look at some of the biggest benefits the SATURN-i has to offer businesses in the financial industry.

### Next-Generation Firewall

Mark a crystal clear line that separates external networks from yours. Use our next-generation firewall to filter traffic based on IP address, protocol, and port, as well as designate which systems and services (HTTP, FTP, etc.) are publicly available.

### Stop Threats in Their Tracks

Block would-be intruders, phishing attempts, viruses, ransomware, botnets, even annoying ads before they come anywhere close to infiltrating the system with a whole suite of protection and filtering applications.

### Keep Critical Info at Your Fingertips

Ensure that business-critical traffic is always given top priority. Bandwidth Control enables you to optimize bandwidth usage so recreational and inappropriate traffic do not impact critical administrative and customer service systems.

## Configuring SATURN-i for the Financial Industry

Customizing the Mission Multiplier SATURN-i to your specific needs is simple and easy. Start with our suggested Finance Configuration, then add or subtract apps to customize it to your liking.
