

Overview

The network security of our federal, state, and local governments are at constant risk. Between the proliferation of massive data breaches, an increase in public scrutiny, black-hat hackers, and state-sponsored hackers, there is no room for a government system to not be protected with appropriate firewalls and associated cybersecurity tools.

The Mission Multiplier SATURN-i has you covered with the ability to prevent intrusions, monitor and control all network traffic, assign unique policies to specific user groups, prioritize network bandwidth for mission-critical tasks, and keep your security above reproach.

Solutions Perfect for Government

Take a look at some of the biggest benefits the SATURN-i has to offer federal, state, and local governments.

Secure and Monitor Your Network

Block malware and unauthorized users before they come anywhere close to infiltrating the system with a whole suite of protection and filtering apps. Then keep an eye on your network traffic to make sure authorized users aren't doing anything inappropriate.

Prioritized Network Traffic

Ensure that mission-critical traffic is always given top priority. Bandwidth Control enables you to manage the priority of mission-critical, recreational, and inappropriate traffic before it impacts the Internet experience of your users.

Compliance Made Simple

Combine your SATURN-i with the Mission Multiplier MARS Box to cover the vast majority of technical controls for DFARS and RMF Compliance. Then provide compliance auditors with exactly what they need with reports that can drill down into any aspect of the network traffic.

Configuring SATURN-i for Government

Customizing the Mission Multiplier SATURN-i to your specific needs is simple and easy. Start with our suggested Government Configuration, then add or subtract apps to customize it to your liking.

SATURN-i Has You Covered

- ✓ Helps meet compliance for FISMA, NERC, NIST, FIPS, and several other federal, state, and county regulations
- ✓ Combine with the Mission Multiplier MARS Box to cover the vast majority of technical controls for DFARS and RMF Compliance
- ✓ Unique and granular policies for specific departmental and user access
- ✓ HTTPS/SSL traffic inspection
- ✓ Active Directory/LDAP Integration
- ✓ Prioritize network traffic for mission-critical applications
- ✓ Layer 7 application awareness to identify all incoming application traffic regardless of port destination
- ✓ Stops filter avoidance
- ✓ Prevents network slowdowns caused by any individual or group of users and applications
