

Overview

Wi-Fi is now the top amenity customers want. It's mandatory for hotels, event venues, and other hospitality businesses to provide a high level of service cost-effectively. Making this Wi-Fi available is simple. Ensuring a secure and reliable internet connection for all of the users on the network is not quite as easy. The Mission Multiplier SATURN-i changes that.

With the SATURN-i's next generation firewall and suite of other security applications, you can provide a secure and reliable internet connection to visitors, customers, staff, and administration alike. Keep threats at bay and business operations running smoothly, all with one affordable and easy-to-implement solution.

Solutions Perfect for the Hospitality/Venue Industry

Take a look at some of the biggest benefits the SATURN-i has to offer hotels, event venues, and other hospitality businesses.

Control Who Gets Wi-Fi and How

Basic internet access can be provided for free. Tiered service offerings with higher bandwidth can be made available to paying customers. All of this can be contained within a Captive Portal, allowing you to keep an eye on all network traffic.

Keep Operations Running Smoothly

Give top priority to the things that make you money. Bandwidth Control enables you to optimize bandwidth usage so recreational and inappropriate traffic do not impact business-critical assets like reservation systems, administration tools, and point-of-sale systems.

Stop Threats in Their Tracks

Block would-be intruders, phishing attempts, viruses, ransomware, botnets, even annoying ads before they come anywhere close to infiltrating the system with a whole suite of protection and filtering applications.

Configuring SATURN-i for Hospitality Businesses & Venues

Customizing the Mission Multiplier SATURN-i to your specific needs is simple and easy. Start with our suggested Hospitality/Venues Configuration, then add or subtract apps to customize it to your liking.

SATURN-i Has You Covered

- ✓ Easily deploy and manage internet access that is cost-effective for free users, and profitable for paid users
- ✓ Captive Portal to identify every user and their network access level
- ✓ Unique and granular policies with Active Directory/LDAP integration for tiered service levels and organizational departments
- ✓ Prevent network slowdowns caused by any individual or group of users and applications
- ✓ Provide optimal QoS for in-room technologies such as VoIP, VOD, IPTV & VPN
- ✓ Optimized bandwidth for mission-critical back-office applications (reservation and administration tools, POS, etc.)
- ✓ Helps meet PCI DSS requirements
- ✓ Layer 7 application awareness to identify all incoming application traffic regardless of port destination
