CMMC Compliance

Mission Multiplier's Approach to CMMC Compliance

As a CMMC-AB Registered Provider Organization™, Mission Multiplier is proud to offer a full spectrum of cybersecurity solutions to help your business navigate the path towards CMMC compliance from beginning to end.

We can help your organization:

- ✓ Understand the CMMC Requirements
- ✓ Navigate the implementation of those requirements
- ✓ Understand how CMMC aligns with DFARS 252.204-7012 and NIST SP 800-171
- ✓ Develop the required policies, procedures, and plans for implementation
- ✓ Prepare for CMMC Assessments with Pre-assessment Readiness Reviews
- ✓ Capitalize on existing assets for the most cost-effective solutions

With the right approach, the implementation of the controls necessary for your target maturity level can go from being a costly source of stress and confusion to being a coordinated, streamlined process. Our approach to CMMC compliance focuses on separating controls into two easily understandable and manageable categories, capitalizing on existing assets, then filling the gaps with proven solutions.

The 2 Categories of Compliance Solutions: Services + Cyber Tools

Services

The Services category entails many of the services usually associated with an in-house Information System Security Officer (ISSO). These duties can be divided into the following domains:

- ✓ Policy
- ✓ Information Management
- ✓ Configuration
- ✓ Training

Cyber Tools

Tools are a natural part of any robust cybersecurity program. The tools required to satisfy most CMMC maturity levels primarily include:

- ✓ First Line Defenses
- ✓ Vulnerability Scanning/SIEM Solutions
- ✓ Malicious Code Protection
- ✓ Disk Encryption
- ✓ Multi-Factor Authentication
- ✓ Backup Infrastructure

If your organization needs assistance with CMMC Compliance, our team of highly-qualified cybersecurity experts is ready to help!

Mission Multiplier's Services and Tools

Mission Multiplier offers a wide array of tools and services that can help your organization address all of the 130 practices and the additional processes required for CMMC level 3 certification.

Services

- ✓ **Policy:** Our policy writers will sit down with key stakeholders within your organization to ensure that each policy is customized to your unique information system architecture and company culture.
- ✓ **Configurations:** Mission Multiplier can help configure and harden your organizational information systems to provide the security you need.
- ✓ **Office 365 & Azure:** We recommend Office 365 and Azure for controlling how information is created, processed, stored, and accessed, and can assist with applying these products in the ways that will best benefit your organization.
- ✓ **Training:** Mission Multiplier can conduct training sessions to ensure that your employees are familiar with and knowledgeable in general and job-specific cybersecurity practices.

Cyber Tools

- ✓ **SATURN-i:** Beyond firewall and web content filtering functionalities, the SATURN-i can also provide services such as intrusion prevention, application control, VPN, and other features that align with the requirements of NIST SP 800-171 Rev. 2 and the CMMC standard.
- ✓ **MARS Suite:** MARS Suite is Mission Multiplier's preferred choice for providing vulnerability scanning capabilities, and we can provide the necessary services to help you install and use MARS Suite efficiently and effectively.
- ✓ **Malicious Code Protection Software:** Mission Multiplier can leverage industry partnerships to bring tested and proven malicious code protection software to your organization.
- ✓ **Disk Encryption:** Mission Multiplier can assist your organization by configuring existing encryption modules within your infrastructure or we can assist in the procurement and implementation of other encryption mechanisms.
- ✓ **Multifactor Authentication:** Mission Multiplier can make recommendations based on your unique infrastructure to provide the most appropriate form of multifactor authentication.
- ✓ **Backup Infrastructure:** Mission Multiplier can assist with the selection, implementation, and maintenance of the most appropriate backup infrastructure solution for your organization.
